Welcome to the IAMSE Fall 2016 Web Seminar Series!

For this series, if you would like to submit questions for the presenter during the session, you may access our backchannel on Today's Meet at the web address below. The questions will then be presented to the speaker, by the moderator.

Enter your name and school when you join the room

***Please note, the backchannel is in addition to our website for viewing slides.**

IAMSE

UMC Utrecht

Entrustment decision making in EPA-based curricula

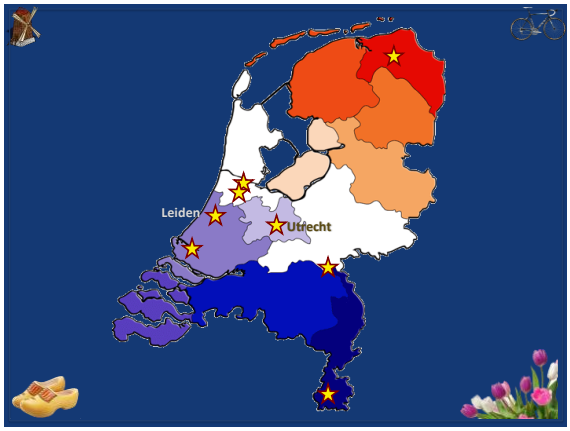
Olle ten Cate, PhD
Center for Research and Development of Education
University Medical Center Utrecht
The Netherlands

Disclosure statement

No conflict of interest reported

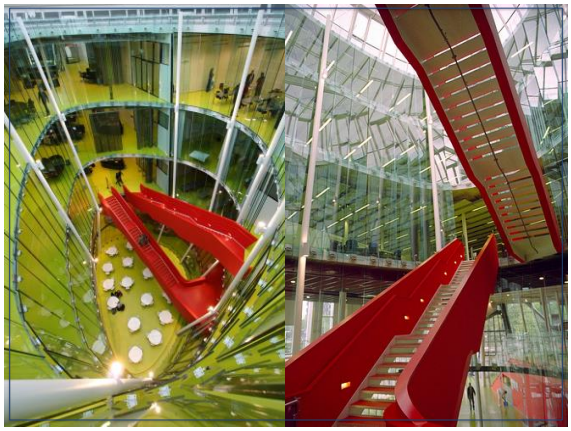
WATCHME

Some of the current work is being sponsored by an EU-FP7 funded project



University Medical Center Utrecht

"X-ray" of UMCU's education building, designed to resemble a body with lungs and CV system



What score would you give the architect?

What score would you give the architect?

Fail	Below expectations	Meets expectations	Exceeds expectations
1 2	3 4 5	6 7 8	9 10

What criteria cross your mind?

What criteria cross your mind?

- **Esthetics** (appearance from all angles; colours used, brightness, transparency, spacial construction, originality)

What criteria cross your mind?

- **Esthetics** (appearance from all angles; colours used, brightness, transparency, spacial construction, originality)
- **Functionality** (capacity, size of room vs required student population size and teaching formats, teaching-specific functions, noise sensitivity)

Overview

- Competency-based medical education
- Update on entrustable professional activities
- Current issues in assessment in the workplace
- Entrustment as assessment

Competency-Based Medical Education

Philosophy
- Better, broader description of the physician
- From *assuming* to *assessing* competence
- Only graduate physicians meeting standards
- Based on competence, not just time in training

Practice
- Detailed description of competencies
- Struggle with teaching and assessment

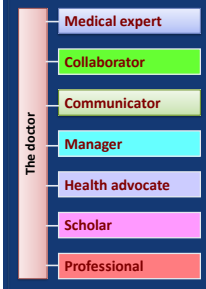
Analytic framework approach

Pangaro & ten Cate 2013

Analytic framework approach

Pangaro & ten Cate 2013

Analytic framework approach

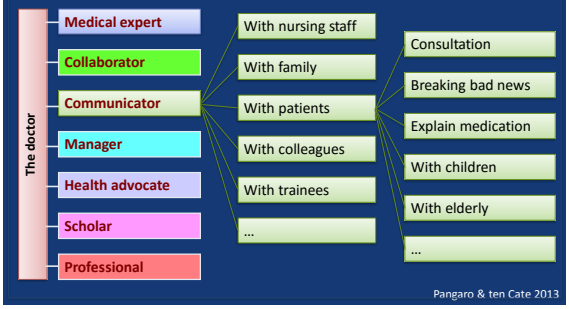


Pangaro & ten Cate 2013

Analytic framework approach

Pangaro & ten Cate 2013

Analytic framework approach



Pangaro & ten Cate 2013

Operational problems

- Regulators (ACGME) need data to support program revalidation decisions
- Data must show confidence that trainees meet predefined standards
- However, competence descriptions too analytical to be covered in assessment; still lack validity
- Items in competency frameworks feel as remote from practice
- Complaints of bureaucracy in collecting and reporting data, feels like time wasted

Created to ground competencies in practice:

Entrustable Professional Activities

Units of professional practice (tasks) that may be entrusted to a learner to execute unsupervised, once he or she has demonstrated the required competence

Enables a shift of focus from individual competencies to the work that must be done

ten Cate, 2005, 2013

E.P.A.

- ***Entrustable***: acts that require trust – by colleagues, patients, public
- ***Professional***: confined to occupations with extra-ordinary qualification and right
- ***Activities***: tasks that must be done

EPAs ground competencies in daily practice

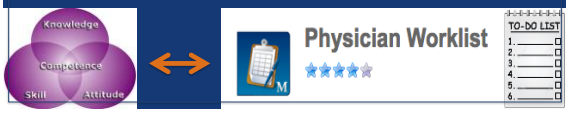
EPAs versus competencies

- EPAs: units of work / tasks that must be done
- Competenties: qualities of individuals

EPAs versus competencies

- EPAs: units of work / tasks that must be done
- Competenties: qualities of individuals

- One can possess competencies; one cannot possess EPAs



Competencies versus EPAs

Competencies	EPAs
person-descriptors	**work-descriptors**
knowledge, skills, attitudes, values	Essential units of professional practice
• content expertise • health system knowledge • communication ability • management ability • professional attitude • scholarly skills	• discharge patient • counsel patient • lead family meeting • design treatment plan • Insert central line • Resuscitate patient

ten Cate et al 2015

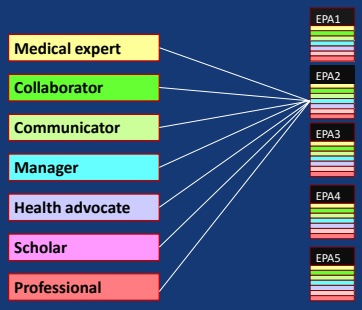
Does it fit?

The matrix: EPAs require multiple competencies

	EPA1	EPA2	EPA3	EPA4	EPA5
Medical expert	++	++	+		++
Collaborator	+		+	++	
Communicator	+	++			+
Leader		+	++	++	
Health advocate	+		++	+	
Scholar	+				++
Professional	+	+	+		

Pangaro & ten Cate 2013

Synthetic EPA framework approach



Pangaro & ten Cate 2013

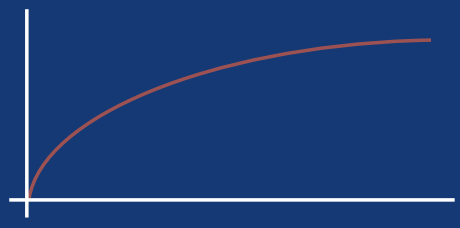
Operational definition of competence

When a professional activity is mastered
- ...on a **threshold** level
- ...that permits **trust**
- ...to act **unsupervised**

Competence is *a stage* in a continuum of development

ten Cate et al 2010

Growth of competence over time



Dreyfus & Dreyfus 1986; ten Cate et al, 2010

Growth of competence over time

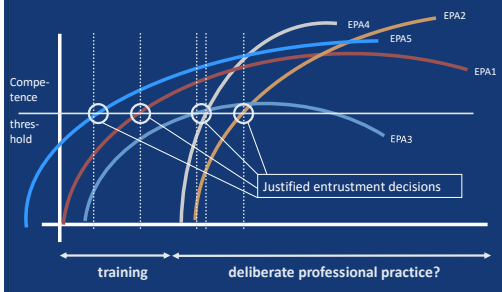
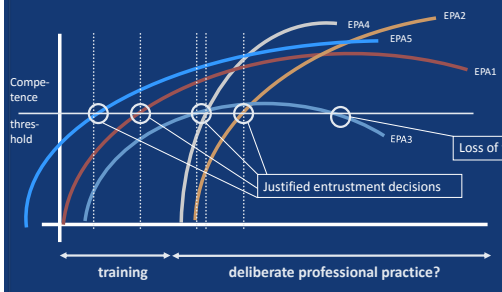
Another trainee



ten Cate et al, 2010

Another trainee



ten Cate et al, 2010

EPA approach serves flexibility

- **Intra-trainee variation**: trainees do not reach competence for everything on last day of training
- **Inter-trainee variation**: different prior knowledge and skills, learning ability, general attitude
- **Context variation**: variable clinical opportunities, local practice (epidemiology, facilities, culture), education-mindedness of staff

One size does not fit all

Entrustment decisions as assessment approach

Recognizing not only the ability, but also the right and the duty to act: transfer of responsibility

ten Cate et al 2016

Issues in workplace-based assessment

Issues in workplace-based assessment

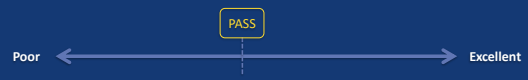
- Generosity error (too high scores – *failure to fail*)
- Halo (generalizing from observing one feature)
- Unreliable (not reproducible)
- Unclear standards (often *no* standards)
- Observer/rater differences
- Ratings unclearly relate to profiency, to personal development, to effort, to reference group performance, et cetera

A reliable test

1. Standardized – equal for all candidates
2. Power to discriminate between individuals
3. Reproducible scores if re-administered

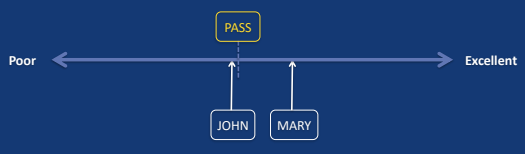
A reliable test

1. Standardized – equal for all candidates
2. Power to discriminate between individuals
3. Reproducible scores if re-administered



A reliable test

1. Standardized – equal for all candidates
2. Power to discriminate between individuals
3. Reproducible scores if re-administered



The trouble with assessment in the workplace

The trouble with assessment in the workplace

- DOES
- SHOWS HOW
- KNOWS HOW
- KNOWS — Can be made very reliable

The trouble with assessment in the workplace

- SHOWS HOW
- KNOWS HOW — Can be made reliable
- KNOWS — Can be made very reliable

The trouble with assessment in the workplace

- DOES
- SHOWS HOW — May be made reliable with much effort
- KNOWS HOW — Can be made reliable
- KNOWS — Can be made very reliable

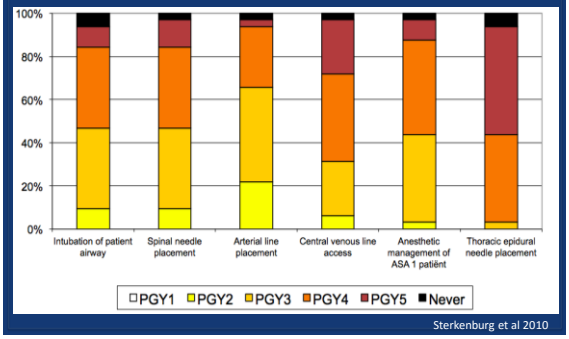
The trouble with assessment in the workplace

- DOES — Cannot meet reliability requirements
- SHOWS HOW — May be made reliable with much effort
- KNOWS HOW — Can be made reliable
- KNOWS — Can be made very reliable

The trouble with assessment in the workplace

- DOES — Cannot meet reliability requirements
- SHOWS HOW — May be made reliable with much effort
- KNOWS HOW — Can be made reliable
- KNOWS — Can be made very reliable

When to trust residents with unsupervised practice? - Large variation among 22 faculty



Sterkenburg et al 2010

Observations cannot always be turned into numbers

- "Not everything that counts can be counted; not everything that can be counted counts"*
- Expert judgment is necessary and cannot always be made fully explicit
- "I know it when I see it"**

*WB Cameron, 1957
**Stewart Potter, US Supreme Court, 1964, judging "obscenity"

Moving from assessment of ability to entrustment decision-making

- Traditional psychometrics do not work well in the workplace
- Variance caused by raters and context is larger than variance caused by trainee qualities
- Worsened by lack of supervision, fragmented care, short patient stays, little observation
- A move from traditional assessment to *entrustment decisions for EPAs* may increase validity

Entrustability/supervision scales

Entrustability Scales: Outlining Their Usefulness for Competency-Based Clinical Assessment

Janelle Rekman, MD, Wade Gofton, MD, MEd, Nancy Dudek, MD, MEd, Tyson Gofton, PhD, and Stanley J. Hamstra, PhD

Rekmans et al 2016

Construct alignment

Good questions, good answers: construct alignment improves the performance of workplace-based assessment scales

Entrustment: recognizing ability + right + duty to act

Assessment of learners in regular education focuses on *evaluation of ability* with no consequences other than individual progress

Entrustment of learners combines the evaluation of ability with the *permission to act* and the *readiness to be scheduled for service*

ten Cate 2016

Psychology of traditional workplace assessment

Psychology of traditional workplace assessment

The trust concept in EPA-based assessment

- Trusting someone is making yourself **vulnerable**
- Calculated **risk** that adverse events are manageable
- Graduates will be certified to carry out activities that supervisors have **not been able to observe** and leaners may have never encountered
- Entrustment decisions require estimation of **adaptive competence** to cope with unfamiliar situations

What do humans value in others who they must trust?

What do humans value in others who they must trust?

1. ABILITY	Competence
2. INTEGRITY	Honesty/truthfulness, benevolence
3. RELIABILITY	Conscientious and consistent behavior
3. HUMILITY	Discernment of limitations and willingness to ask for help

Mayer et al 1995, Kennedy et al 2008, O'Neill 2013, ten Cate, 2016

What do humans value in others who they must trust?

Five levels of supervision, reflecting increasing trust in trainee autonomy

1. **Be present but no permission to enact EPA**
2. **Practice EPA with direct (pro-active) supervision**
3. **Practice EPA with indirect (re-active) supervision**

----------[threshold]---

4. **Unsupervised practice allowed (distant oversight)**
5. **EPA may be supervised with junior learners**

ten Cate & Scheele 2007

Entrustment decisions – two modes

Ad-hoc entrustment decisions
happen every day; situationally determined; based on *presumptive* trust and *initial* trust. Formative nature.

Summative entrustment decisions*
should be based on *grounded trust* (multiple sources of documented information); serves as certification / license to act. Summative nature.

*sometimes called Statement of Awarded Responsibilty (STAR)

Wrapping up

- CBME: a great advance, but translating competencies to teaching and assessment is problematic - EPAs may revitalize CBME by connecting competencies to practice
- Workplace-base assessment is fraught with difficulties
- Entrustment decision-making may serve as a route forward
- Learners should be trusted to work by themselves with indirect supervision as soon as justified
- Scales using supervision levels as anchors appear to increase reliability
- Technology may help to collect information in support of entrustment decisions
- Entrustment decisions as assessment: area of ongoing research
