

Objectives

- Describe the evidence for low back pain management from the current medical and CAM literature
- Provide examples of interdisciplinary educational opportunities around pain management

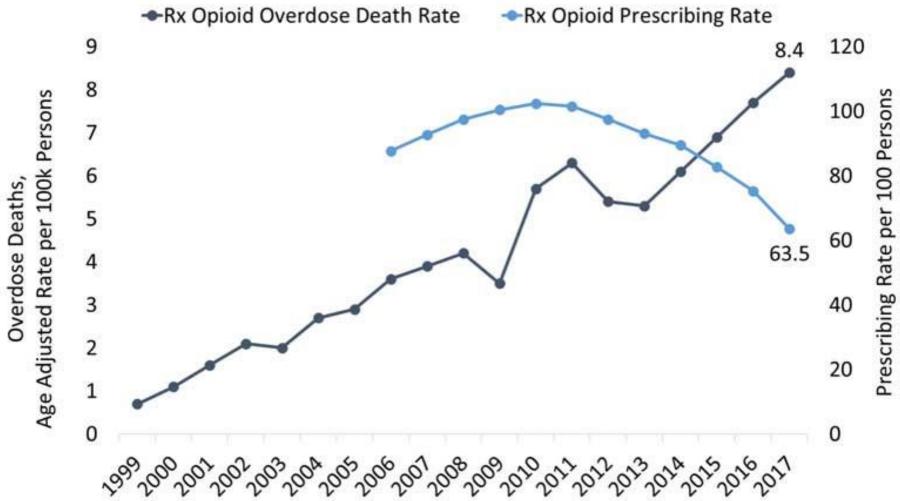

In 1999 to improve pain management, the American Pain Society launched the "Pain as the 5th Vital Sign" initiative.

It required a pain intensity rating (0 to 10) at all clinical encounters.

The Big Three

- ✓ Analgesics
- **✓**NSAIDS
- ✓ Muscle relaxants

Summary of Recent Evidence for OTCs and Muscle Relaxants

Drug	Effect on Pain	Evidence	Strength of Evidence	Author	
Acetaminophen	No effect	1 RCT	Low		
Skeletal Muscle Relaxants	Pain Relief RR 1.72 (95% CI 1.32-2.22) at	1 SR (4 RCTs), 1,RCT	Moderate	Chou 2017	
	5-7 days CNS events RR, 2.04 [95% CI, 1.23 to 3.37]; I ₂ = 50%)			Annals of Internal Medicine	
NSAIDS	No clinically sig effect short term (NNT=6) Minimal clinically sig effect for chronic pain	Immediate Acute =6 RCTs (n=473) Chronic=12 RCTs	Moderate to High	Machado 2017 Annals of the Rheumatic Diseases	
HNIVERSITYof		Chronic=12 RCTs (n=1444)			

Biopsychosocial model of pain

https://www.performancesportstherapy.net/2016/07/why-do-i-still-hurt-months-after-the-injury/

2017/2018 Guideline Consensus on Treating LBP

Summary:

- ✓ Approach management from a multidisciplinary biopsychosocial framework (including risk stratification)
- ✓ Educate patient about pain
- ✓ Keep person active and working
- ✓ Only use imaging if it will change management
- √ 1st choice of therapy should be non-pharmacological
- ✓ Manual therapy and psychological approaches should be used in conjunction with a treatment program including exercise

2017/2018 Guideline Consensus on Treating LBP

Summary:

- ✓ Acute LBP- superficial heat, massage, acupuncture, or spinal manipulation
- ✓ Chronic LBP- exercise, multidisciplinary rehabilitation, acupuncture, mindfulness-based stress reduction, tai chi, yoga, motor control exercise, progressive relaxation, electromyography biofeedback, low-level laser therapy, operant therapy, cognitive behavioral therapy, or **spinal manipulation**
- ✓ Limit or avoid electro modalities like US, TENS and EMS and lumbar traction
- ✓ Consider NSAIDS and spinal muscle relaxants (accounting for pt preferences and risks)
- ✓ Consider weak opioids only when other conservative pharmacological management has failed.
- ✓ Avoid surgery and invasive spinal procedures (unless conservative management fails)

Association of Spinal Manipulative Therapy With Clinical Benefit and Harm for Acute Low Back Pain: Systematic Review and Meta-analysis

Treatments

U.S. Department of Veterans Affairs

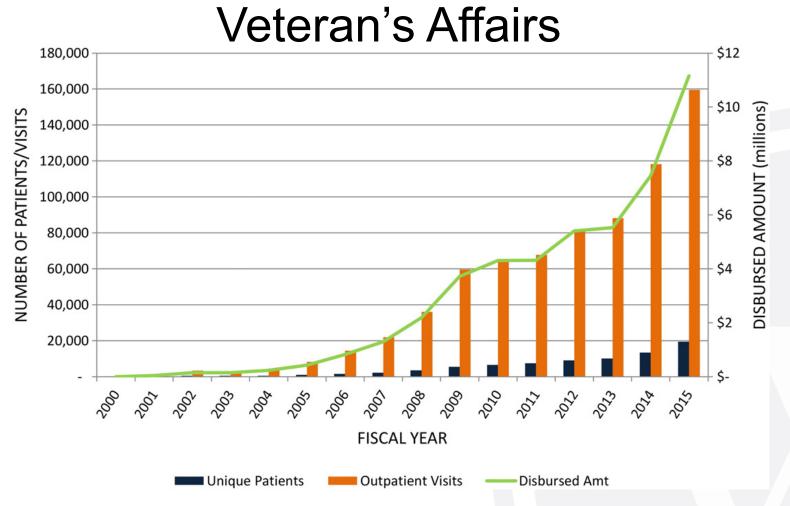

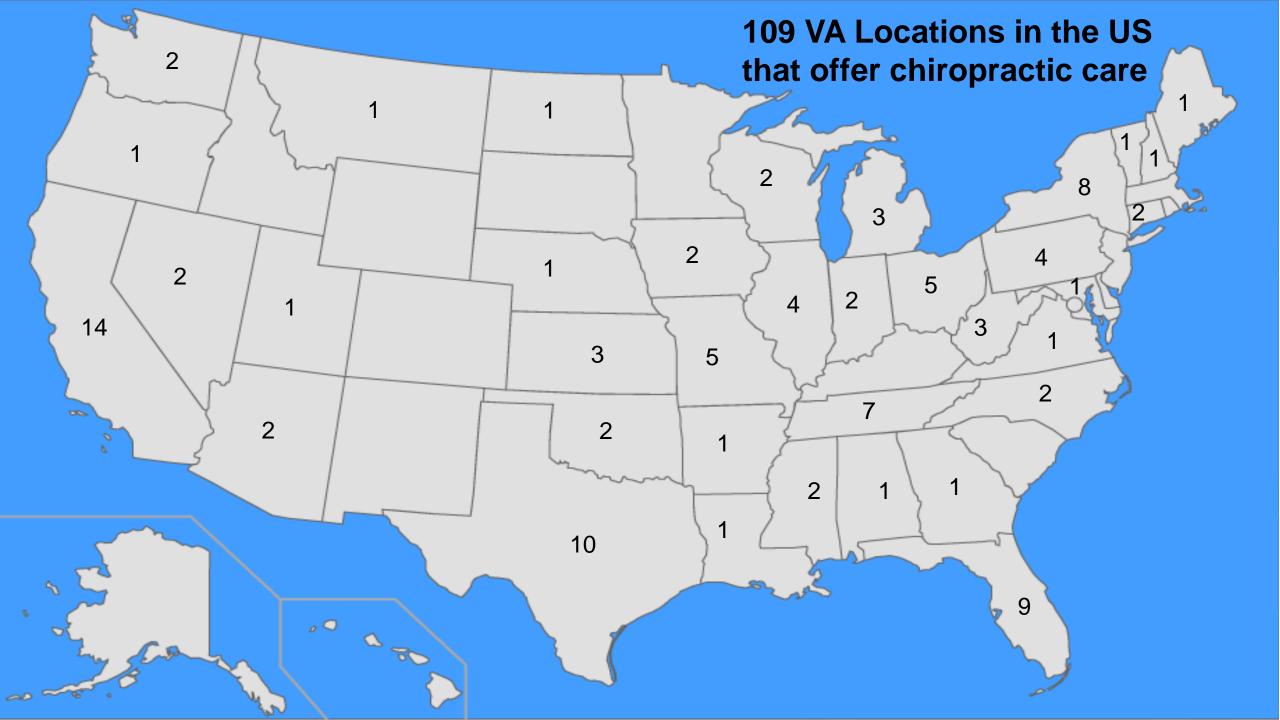

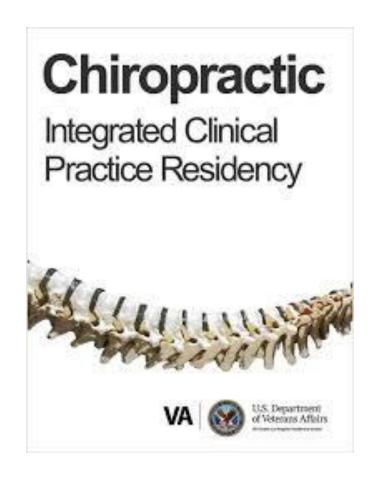

Fig 3. Total number of unique VA patients receiving purchased chiropractic care outside of VA, total number of those visits, and total dollar amount disbursed for purchased chiropractic services.

Preceptorships and Residencies available for end of program and post graduates

Integrated Clinical Practice

Patient Care ~1,250 hrs (66%)

- Mentored by senior VA DCs
- Team-based collaborative management, including highly complex cases

Interdisciplinary Rotations ~320 hrs (17%)

 Including primary care, medical/surgical specialties, mental health specialties, rehabilitation disciplines

Scholarly Activities ~320 hrs (17%)

- Individual and group didactic content and projects
- Attend/give presentations; teach/assess DC students

Aim

 To provide graduate DCs with advanced training and experiences relevant to careers in hospitals, integrated medical systems, and/or academia

Details

- · Full-time, 1-year program
- \$40k average annual stipend
- Paid time off Holidays and vacation
- Eligible for life and health insurance
- Open to US citizens only

Residents report high satisfaction with the program. Medical specialists report very favorable perception of residents' competence and value.

DC Residents

"This was life changing for me" (Resident, Class of 2015)

"This opportunity...has truly unlocked the unlimited potential of my chiropractic education and training" (Resident, Class of 2016)

"This residency has had such a powerful impact on my career which has exceeded my expectations" (Resident, Class of 2017)

MD Attendings

"His history and exam was on par with a mid level neurosurgery fellow" (VA Neurosurgeon)

"I had her teach the low back exam to my med students" (VA Primary care physician)

"I wish we could hire him right now" (VA Physiatrist)
